

Study job with a focus on data processing in the areas of HVAC, Electrical & Instrumentation, Automation and Process Control (Pharma industry)

Do you want to combine your studies with practical experience as a consulting engineer with a focus on HVAC and/or with tasks within Electricity & Instrumentation and Automation as well as Process Control? Then we have the perfect student job for you.

Sommerset Engineering is looking for 1-2 engineering students with an interest in HVAC. We envision that you have a few years left of your studies and can devote 10-15 hours a week to an exciting job.

You will try your hand at calculation tasks, data processing, drawings, and analyses. This is a professionally and personally developing student job in a safe environment.

We have an office close to Roskilde station, but much of the work can be done from other locations. Working hours are flexible within the agreed framework, so you don't have to neglect your studies.

Qualifications

Your qualifications are a strong professional curiosity combined with an interest in HVAC, Electrical & Instrumentation and Automation as well as Process Control.

It is a prerequisite that you

- Can handle data and information in Excel
- Can design and document the structure in Autodesk and/or Revit
- Has good written skills in English
- Can work structured and systematically
- Is quality conscious

It is also an advantage (but not a requirement) if you have knowledge of

- Simulation tools for HVAC, Electrical & Instrumentation and Automation as well as Process Control.

Application

If you think this sounds interesting, send your CV and an application marked 'Study job - your name' to studiejob@sommerset.biz.

We are looking forward to hearing from you. We regularly call for interviews.
